Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1858 Excerpt: .of the Britannica. crystal in different directions j1 the discovery of polarization by reflection is received with characteristic candour, as giving a temporary blow to the undulatory theory;2 whilst in a later paper the cause of chromatic polarization is convincingly deduced from the principle of interferences, and in the space of two lines the peculiar coloured laminte occurring in Iceland spar, which had been noticed by several experimenters, are accounted for. From about 1815 the optical discoveries of Young (470.) were so intimately connected with those of his younger f friend and rival Fresnel, that it seems best to defer fjghdeour account of them until we consider (in 3 of this ferred to chapter) the peculiar researches of Fresnel, which 3. ultimately rendered the phenomena of polarization the most impregnable position of the partizans of the undulatory theory. The first great step was the conception of transverse vibrations of ether, as constituting polarization. This, as we shall see, was first published by Young. It is to be regretted that the tardy and imperfect publication of Fresnel s memoirs on the one hand, and the resolution of Young to adhere to an anonymous and indirect mode of announcing his discoveries, on the other, render the history of the subject sometimes obscure. The correspondence between them, first fully published by Dr Peacock, throws some light upon it; but several important letters have not been recovered. I had intended devoting a portion of this section to (471.) Dr Young...
